Summary

Support Engineer Associate at AWS resolving live customer cases on generative-AI services, specializing in **Amazon Bedrock and Bedrock AgentCore** — an early domain expert on AgentCore, one of AWS's newest GenAI services. Deep-dive troubleshooter for regulated enterprise customers (major banks, global tech): reproduces issues in a sandbox, pulls CloudTrail for evidence, and builds diagnostic tooling to reach root cause. Five AWS certifications earned in 7.5 months, backed by data, ML, and agentic-AI credentials. Non-traditional path (design → software development → cloud) with a track record of ramping fast on unfamiliar technology.

Experience

Amazon Web Services — Support Engineer Associate

Feb 2025 – present · Women in STEM Program · Sydney

Live customer casework (Bedrock, AgentCore, SageMaker)

- Resolved **40+ enterprise customer cases** across Amazon Bedrock, Bedrock AgentCore, and SageMaker/Unified Studio for regulated customers including major banks, financial-services firms, and global tech companies — spanning model access and quotas, RAG quality, latency root-cause analysis, agent gateway and identity, and policy configuration.
- Standard practice: **reproduce before answering** in a sandbox account, pull **CloudTrail** from the customer's account for evidence, and build Python/boto3 diagnostic tooling to isolate root cause.
- Identified and routed **public documentation gaps and service-team escalations** rather than over-promising; corrected inaccurate auto-generated case drafts.

Building & knowledge-sharing

- Building an **agentic workflow on Amazon Bedrock AgentCore** to accelerate support case investigation.
- Authoring a **SageMaker knowledge article** to close a documentation gap for customers.
- Contributing a **documentation update for Bedrock AgentCore Harness**.

Internal innovation challenge (Jun–Aug 2026)

- Authored a concept proposal reimagining AWS Support as a persistent, context-aware customer workspace — grounded in customer research data, with a de-identified fleet-pattern design and a consent-based automated-fix flow; team deliverables under leadership panel review.

Community & events

- Technical Assistant, **AWS Sydney Summit Kiro Workshop** (May 2026) — hands-on customer guidance on a newly launched tool at a public AWS event.
- Taught AI fundamentals and delivered a career talk to Year 10 students, SWS Activate program (Jun 2026).
- Active member of the **Asians at Amazon** affinity group — helping organise the community's Mid-Autumn Festival event.
- Designed the winning Women in STEM logo and the SE team banner for APJ Tech Summit 2025.

Training year (Feb 2025 – Mar 2026)

- Completed intensive structured training — AWS core services, networking fundamentals, security, Linux administration, Python —.
- Earned 5 AWS certifications in 7.5 months (Apr–Nov 2025) alongside program work.

Earlier Career

Graphic & UX/UI Designer · Junior Software Developer

2015–2022 · Seoul, Brazil, Sydney

- 6 years across design roles (Design In & Out, NoHarm AI-for-health institute, Sydney Forró Dance, exhibition coordination) delivering client-facing work with measurable impact (130% auction attendance, 200%+ web traffic, 30% order lift).
- Junior Software Developer at NoHarm (AI-for-health institute), contributing Python/Flask code to the product API. Retrained formally through Certificate IV in Information Technology (TAFE NSW) — the foundation for the move into cloud.

Education

Diploma of Cloud Computing — Swinburne University (completing 2026)

Certificate IV in Information Technology — TAFE NSW (2021)

Certificate IV in Graphic Design — Shillington College, Sydney (2018)

Bachelor of Design in Architecture — Konkuk University, Seoul (2015)

Certifications

AWS Certified: Solutions Architect – Associate (Jun 2025) · Data Engineer – Associate (Nov 2025) · Machine Learning Engineer – Associate (Nov 2025) · AI Practitioner (May 2025) · Cloud Practitioner (Apr 2025)

In progress: AWS Certified Generative AI Developer – Professional

Skills

AWS: Bedrock, Bedrock AgentCore, IAM, CloudWatch/CloudTrail, EC2, Lambda, S3, VPC, RDS/DynamoDB, SageMaker

Programming: Python (working language — boto3 diagnostic tooling, sandbox repos); object-oriented fundamentals via C# and Java, plus JavaScript and SQL (Certificate IV in IT).

Foundations: Linux, networking (TCP/IP, DNS, TLS), security fundamentals

Customer: technical case correspondence, root-cause analysis, explaining complex issues to technical and non-technical audiences

Languages: English, Korean (native), Portuguese (conversational)
